

**Do you also want your community to be healthy and live long?  
Why not start a Sustainable Agricultural Commune  
(S.A.C.) together!**

- ◆ We organize a team and we will start by canvassing and spreading the word in communities, explaining the benefits of sustainability, healthy food and building and sustaining our communities, our environment and our health.
- ◆ We intend to find a plot, no matter how large or small, which is available to be used for communal goals.
- ◆ We link with local underclass community organizers and pool their assets, expertise and labor to educate, organize and mobilize the community's residents for the Sustainable Agricultural Commune.
- ◆ We determine which fruits, vegetables, herbs and grains are most widely consumed, popular and commercially valued in that community and area.
- ◆ Once done this must be compared to which crops among those will grow most effectively and profusely in that unique climate and environment.
- ◆ Equally essential: organizing, training, helping movement activists, community organizers and residents into the divisions of labor necessary to initiate the commune.
- ◆ We will follow the collective ownership format.
- ◆ Everyone who contributes something to that cycle will be given a commune membership-card entitling them to a percentage in produce and dividends.
